Articulated rollers

RW 1800 / RW 3005 / RW 5005

RW 1800

RW 1800-SPT: Compact dimensions for various applications

Universal compaction application

Individual

A roller, specially designed according to the wishes of the customer? This is not a great dream, this is reality with Rammax. The modular structure of our rollers allows the customer to arrange his machine individually according to his needs.

Basic concept

- An articulated roller has to fulfil very different applications. Ideal compaction results need to be achieved in short time while considering different soil types, varying civil works and permanent changing labour. Therefore the demands of the customer on the equipment are enormous and very different.
- With the objective of including all wishes in the development of the rollers the current product line was made possible.
- Therefore these machines are available in different sizes and designs. The customer has the possibility to compose the roller considering his requests.
- With smooth drum or pad foot drum, with dozer blade or with the optional smooth drum segments, whereby the pad foot drum can be converted into a smooth drum.

RW 1800

- The RW 1800 features an enormous hydraulic performance. Two separate pumps supply the hydraulic motors in the drum and the two wheel motors.
- The serial float divider for both rear wheels works like a differential lock and prevents the rear wheels from spinning.
- The compact dimensions of this machine allow its use for almost unlimited applications; such as in trenches, development areas or road construction.

Dozer blade

- Equipped with a hydraulic dozer blade, the roller can be used for backfilling and compaction work without additional earth moving equipment.
- In combination with the tilt function on the blade the machine is capable of preparing a perfect plane surface followed by compaction with the same machine.

Available versions

- RW1800 - with smooth drum
- RW 1800-PT - with smooth drum and 4-way dozer blade
- RW 1800-S - with pad foot drum
- RW 1800-SPT - with pad foot drum and 4-way dozer blade

Clearly arranged cockpit

Blade operation

Engine

4-way dozer blade

RW 3005 and RW 5005

RW 3005-SPT: Universal machine for various applications

RW 5005: Compact machine with high performance

Universal compaction application

RW 3005 / 5005

- New hydraulic concept by the use of the „Twin-Lock“-system. This is a fully automatic traction management system with a completely mechanical mode of operation. In case of slip in one of the drive components, the torque is automatically and steplessly forwarded to the remaining drive systems.
- The machine only stops when both drive wheels and the drum are without traction. As a result a maximum gradeability on every site is reached.

Comfort

- Generously dimensioned drivers platform mounted on completely vibration-free bearings. This effectively eliminates the transmission of vibrations and stress to the driver.
- One-hand operation of all blade functions and vibration functions.
- Clearly arranged cockpit and simple operation guarantee effective utilization.

Dozer blade RW 3005-SPT

- Equipped with a hydraulic dozer blade, the roller can be used for backfilling and compaction work without additional earth moving equipment.
- In combination with the blade tilt function (4-way blade) the machine is capable of preparing a plane surface followed by compaction with the same machine.

RW 5005

The RW 5005 was developed on the basis of the RW 3005.

Therefore we were able to realize an extremely compact roller compared to the weight class of the machine. Due to the small dimensions and the resulting agility the machine outstands also on smaller civil works with its maximum performance.

Variable

- The RW 5005 is serially equipped with a variable compaction output. Hereby it is possible to switch between two options:
 - 1)Combination of low frequency with high amplitude und compaction force
 - 2)Combination of high frequency with lower amplitude and compaction forceThe roller can be adapted to various soil types and fields of application.
- On the RW 5005-S the setting of the rotating direction of the eccentric shaft can be switched. The gradeability and compaction output on slopes can be optimized with this function.

Cabin

- Both RW 3005 and RW 5005 have ROPS driver platforms as basic version. Optionally a closed cabin with heating, heatable rear window and front and rear working lights are available.

Modern, clearly arranged cockpit
